NCC & Logs

NCC

Run a full health check pass

```
ncc health_checks run_all
```

Show installed NCC version

```
ncc --version
```

Hihi

```
ncc 1701
```

Logs

Create a log bundle for Nutanix support

```
logbay collect
```

Logs Location

Per-component logs on a CVM (latest file + list all, same pattern per service)

```
/home/nutanix/data/logs/zookeeper.out
/home/nutanix/data/logs/genesis.out
/home/nutanix/data/logs/curator.out
/home/nutanix/data/logs/stargate.out
/home/nutanix/data/logs/cerebro.out
```

```
/home/nutanix/data/logs/chronos.out
/home/nutanix/data/logs/prism_gateway.log
ls -ltrh /home/nutanix/data/logs/<component>*.*
```

List all FATAL logs across all CVMs

```
for i in `svmips` ; do echo "CVM: $i" ; ssh $i "ls -ltr /home/nutanix/data/logs/*.FATAL" ;
done
```

Check for Cassandra crashes / restarts

```
grep "Logging initialized" /home/nutanix/data/logs/cassandra/*
```

Upgrade history on a CVM

```
/home/nutanix/config/upgrade.history
```
